

AI Calling Agent: Executive Brief

Plan for "Omar", the AI agent that calls our Leads and books Discovery Calls

Research and report by
Engr Abdullah Bukhari
Snr. SWE, HoplonCo
3 October 2026 · Version 1.0

1 What we will build

Many people fill in the form on hoplonco.com. Today, we do not call all of them quickly.

Omar is an AI Calling Agent. He calls each **Lead** by phone, in English. He:

- Gives the information that the Lead asked for.
- Finds out if the Lead wants to buy (**Intent to Buy**).
- Books a 30-minute **Discovery Call** with our Manager on Google Calendar.

Omar calls a new Lead some minutes after the form arrives. He also calls the old Leads in our Excel file.

Omar never talks about price or timeline. The Manager does that.

2 Key numbers

0.6–0.8 s

Target reply time. A person replies in about 0.2–0.5 s.

≈ \$1.00–1.20

All-in cost for each call minute* at 1,500 minutes each month

≈ \$0.44

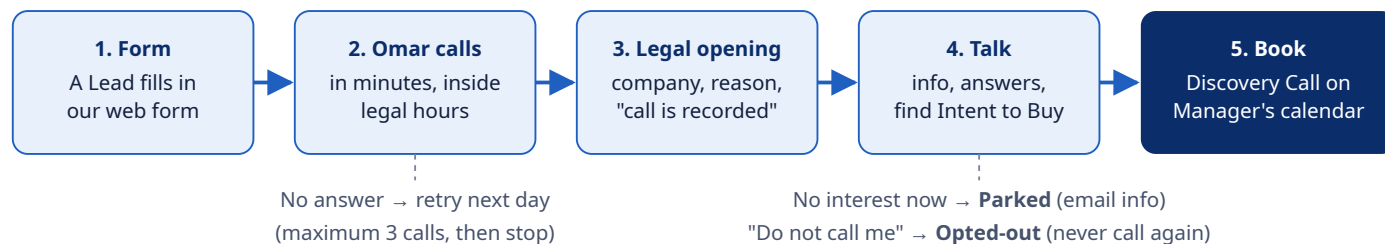

Usage cost for each minute* (phone, AI, LiveKit)

≈ \$825–1,145

Fixed cost each month* (AI server, cloud, tests)

* Estimated costs, with a 30% safety margin. We will report the real costs after the first test calls.

3 How one call works

4 Cost for each minute, all-in (estimate)

Call minutes each month →

1,500 min   **\$1.00–1.20**

5,000 min   **\$0.61–0.67**

10,000 min   **\$0.52–0.56**

 Usage \$0.44 (phone \$0.39)  Share of fixed cost

All numbers are estimates with a 30% safety margin. The phone line is the largest usage cost. More minutes each month make each minute cheaper.

5 Why it is fast

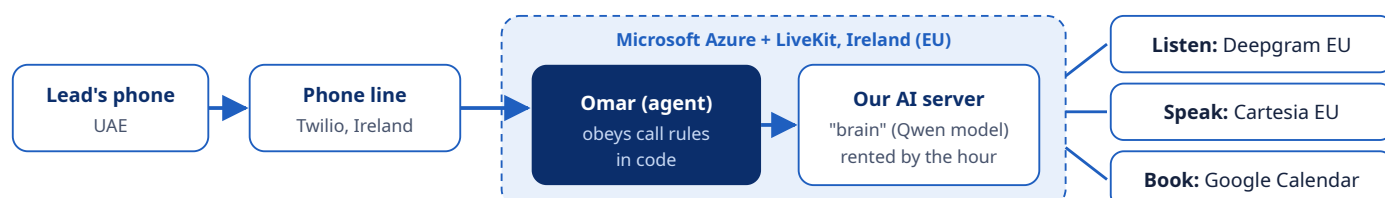

First plan  **1.4–1.7 s**

v1 (this plan)  **0.6–0.8 s**

v2 (all UAE)  **0.5–0.7 s**

We run the AI "brain" on our own server, next to the call software. Omar also starts to think while the Lead still talks. All times are estimates. Real calls will measure them.

6 The technology in one view

⚠️ Two items stop go-live. The legal team must close them.

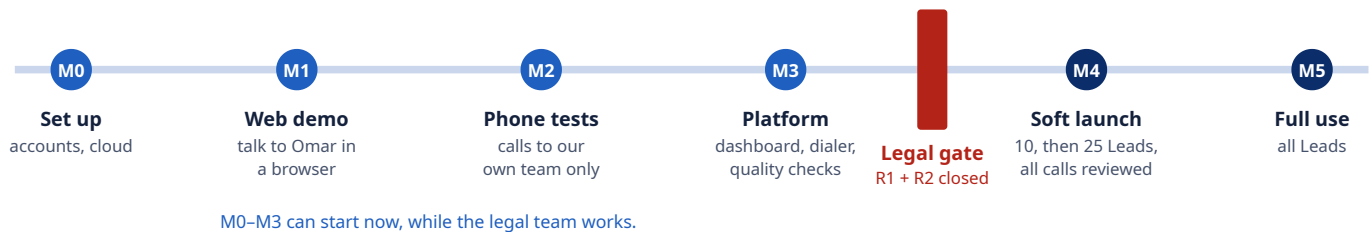

- **R1, caller number:** UAE law requires a local e& or du number, registered to our trade licence. Today, our phone provider can show only a foreign number.
- **R2, approval:** marketing calls need prior approval from the authority. The fine for calls without approval is up to AED 150,000.

7 Risk register (summary)

ID	Risk	Status	What we do
R1	Foreign caller number. This is against UAE telemarketing law.	Blocks go-live	Legal team gets an e&/du number. No engineering change.
R2	No approval for marketing calls yet.	Blocks go-live	Legal team applies for approval.
R3	Old Leads did not agree to calls with a consent box.	Accepted by owner	The C-suite must accept this risk. The new form gets a consent box.
R4	"Do Not Call" register check is not in place yet.	Open	Legal team confirms the check. Engineering builds the gate now.
R5-R6	Call recording consent. Voice data goes to EU service providers.	Reduced by design	Recording notice on each call. Legal team signs data agreements.
T1-T8	Technical: accent accuracy, speed, voicemail detection, cost.	Reduced by design	Tests on each code change. Soft launch with 10 Leads first.

Fines in UAE law go from AED 10,000 to 150,000 for each violation. The full register has 10 legal and 8 technical risks.

8 Plan: six steps

9 Decisions we need from you

1. Approve the estimated budget: about \$0.44 for each call minute, plus about \$825–1,145 each month. Real costs follow after the first tests.
2. Tell the legal team to close R1 and R2. Also ask them to confirm R4–R6.
3. Accept risk R3: we call old Leads without a recorded consent box.
4. Approve the soft launch: 10 Leads, then 25 Leads, with a review of each call.

10 Later: version 2

- Move all parts to Azure UAE North, with a local e&/du line. Reply time goes to about 0.5–0.7 s.
- All call data stays in the UAE.
- Add CRM updates, Arabic, and inbound calls.
- Sell the Calling Agent to our clients as a product.

Our promise for safety: Omar says that he is an AI if a Lead asks. He never says "booked" before the calendar confirms. He obeys the legal call hours and call limits. He stops at once on "do not call me".
